

MILLECOQUINS RIVER WATERSHED MANAGEMENT PLAN

PUBLIC MEETING

FREE EVENT

Water sampling has shown hazardous levels of E. coli bacteria in Doe and Furlong Creeks. High bacteria levels are often caused by failed septic systems, fertilizer and manure runoff from agricultural fields. Join the Superior Watershed Partnership for refreshments, snacks, and conversation on the draft version of the Millecoquins River Watershed Management Plan. This plan includes an inventory of natural resources and establishes a plan to improve water quality for drinking, recreation, fish and wildlife. Ideas and feedback are welcome!
